

9th Annual Conference of Pharmacometrics (ACoP9)

The ninth Annual Conference of Pharmacometrics (ACoP9) is the annual scientific meeting of the International Society of Pharmacometrics. More than 650 researchers and participants from pharma, academia, and non-government organizations attended ACoP9 in San Diego between October 6th and 11th to exchange the latest research and application of quantitative methods to pharmaceuticals.

Members of the the C-Path quantitative medicine team who support CPAD attend this conference regularly to stay abreast of the current cutting edge methods, strategically network with our members and key opinion leaders, and develop collaboration opportunities for CPAD. This year, two posters were accepted for presentation:

[Conrado et al.: “Towards FDA and EMA endorsement of a clinical trial simulation tool for amnesic mild cognitive impairment.” On display: Monday, Oct 8, 2018](#)

[Burton et al.: “Solutions for end-user accessibility of regulatory endorsed drug development tools” On display: Tuesday, Oct 9, 2018](#)

Both posters attracted significant attention, including the first poster which received a prestigious quality award (1 of 3 out of 300), and were well received by ACoP9 participants.

ACoP10 is scheduled for October 20th through 23rd, 2019 in Orlando, FL.
