We know TB patients struggle to get quality Dx and Rx in many LMICs

Missing patients and major access issues

Long, complex pathways to TB care & diagnostic delays

Broken care cascades

Challenges in getting decentralized care

Limited access to new tools

Cost and out-of-pocket expenses

Missing patients and poor access to care

ACCESS TO TB CARE 2015  World Health Organization

6.1 million people had
ACCESS TO QUALITY TB CARE

4.3 million people
MISSED OUT

Better reporting, diagnosis and
access to care will close this gap

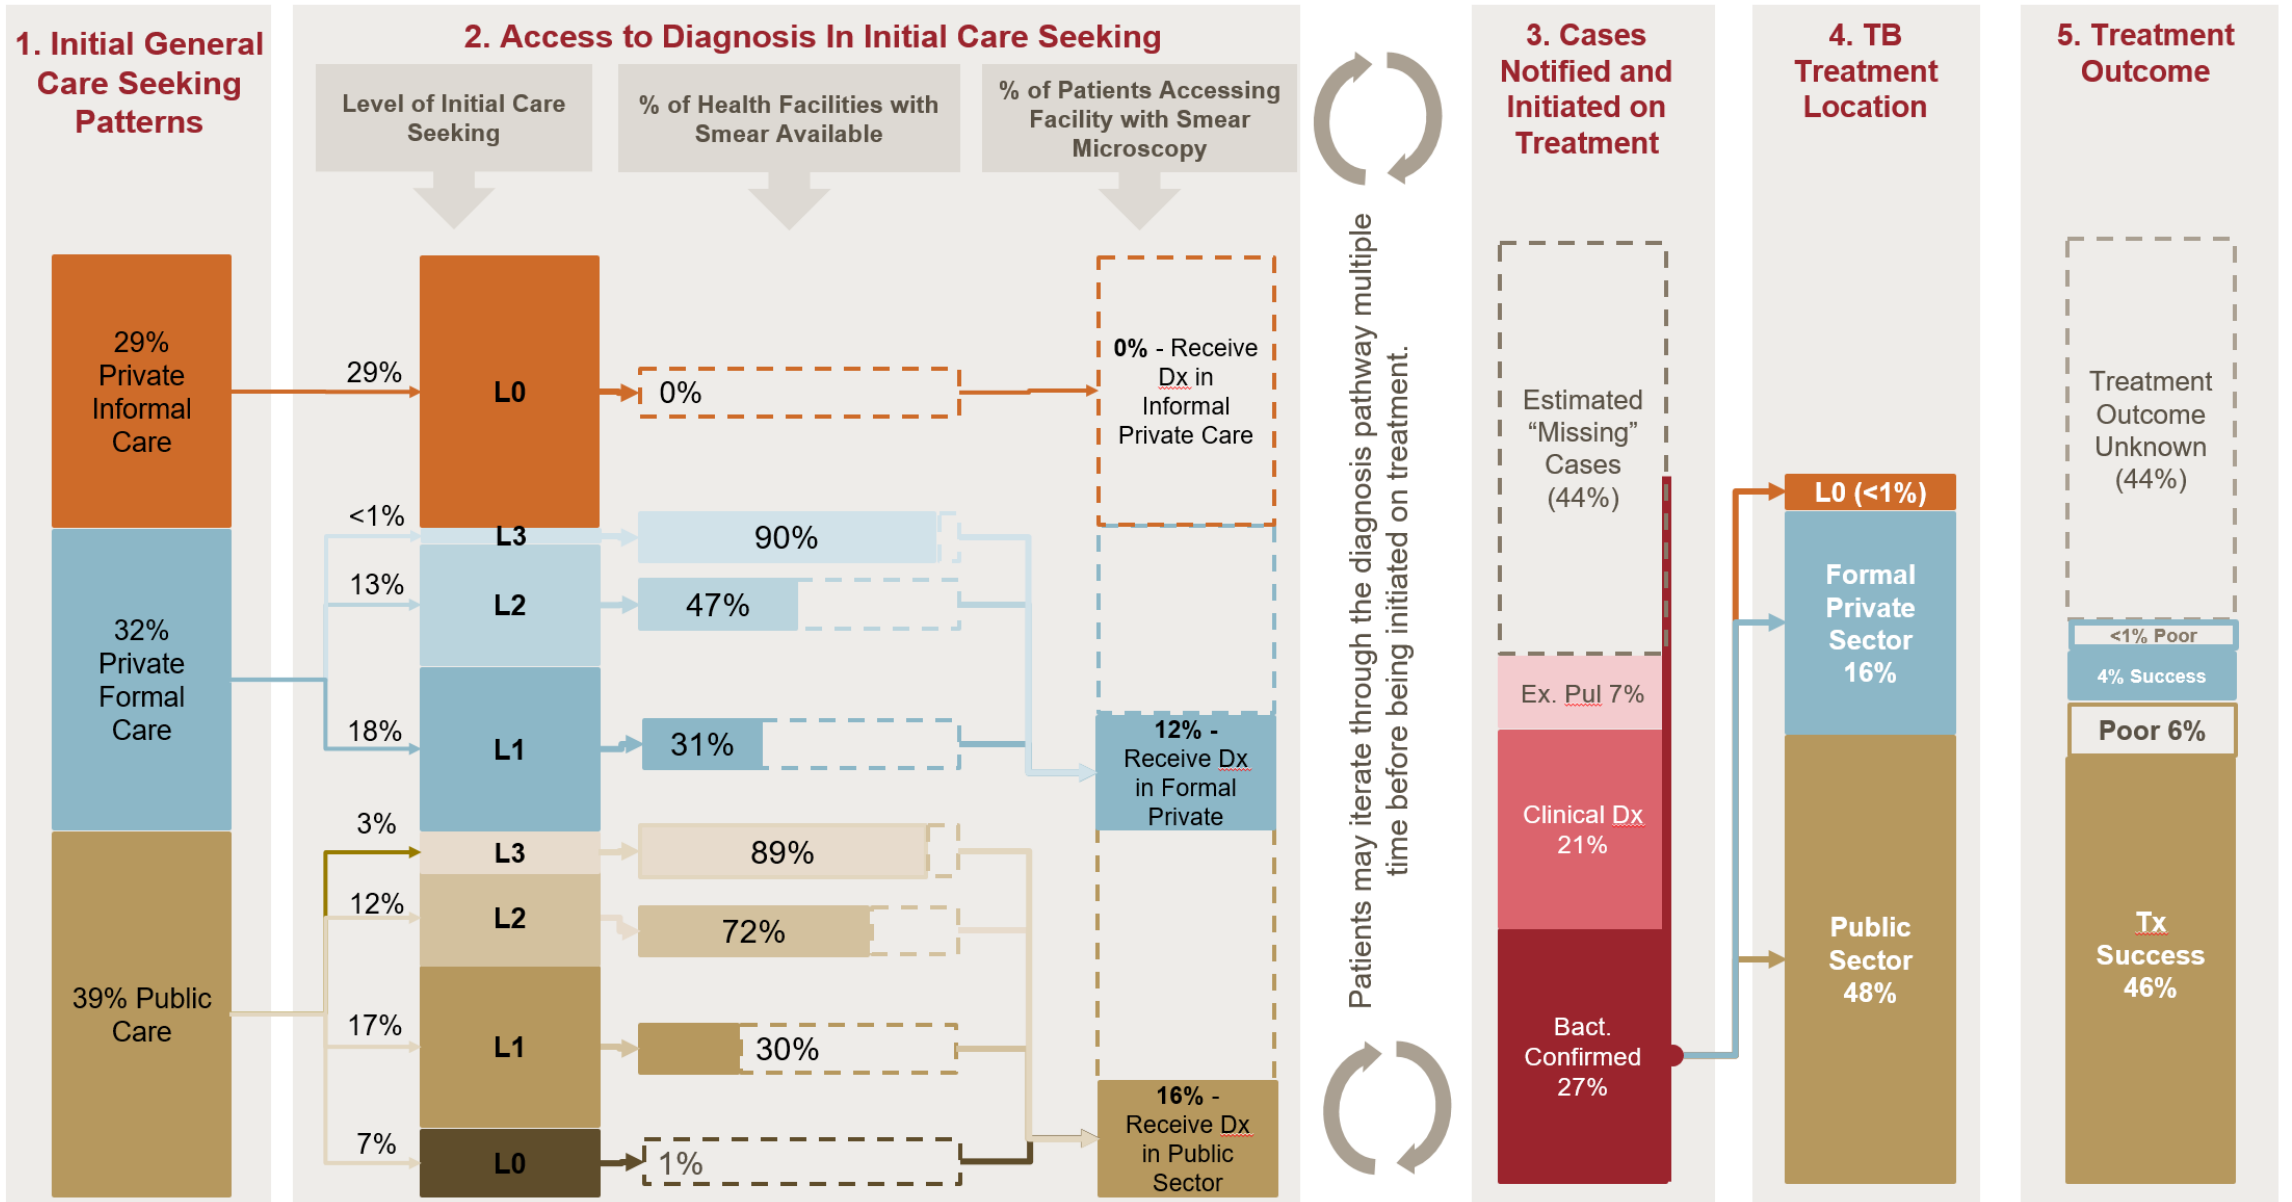

2015 DRUG RESISTANT TB  World Health Organization

Only 1 in 5 people
needing treatment for
multidrug-resistant TB
ACTUALLY RECEIVED IT

50% of those who started
MDR-TB treatment **WERE CURED**

Better detection, prevention
and cure will address the crisis
of multidrug-resistant TB

Patient pathway analysis: 11-Country Summary

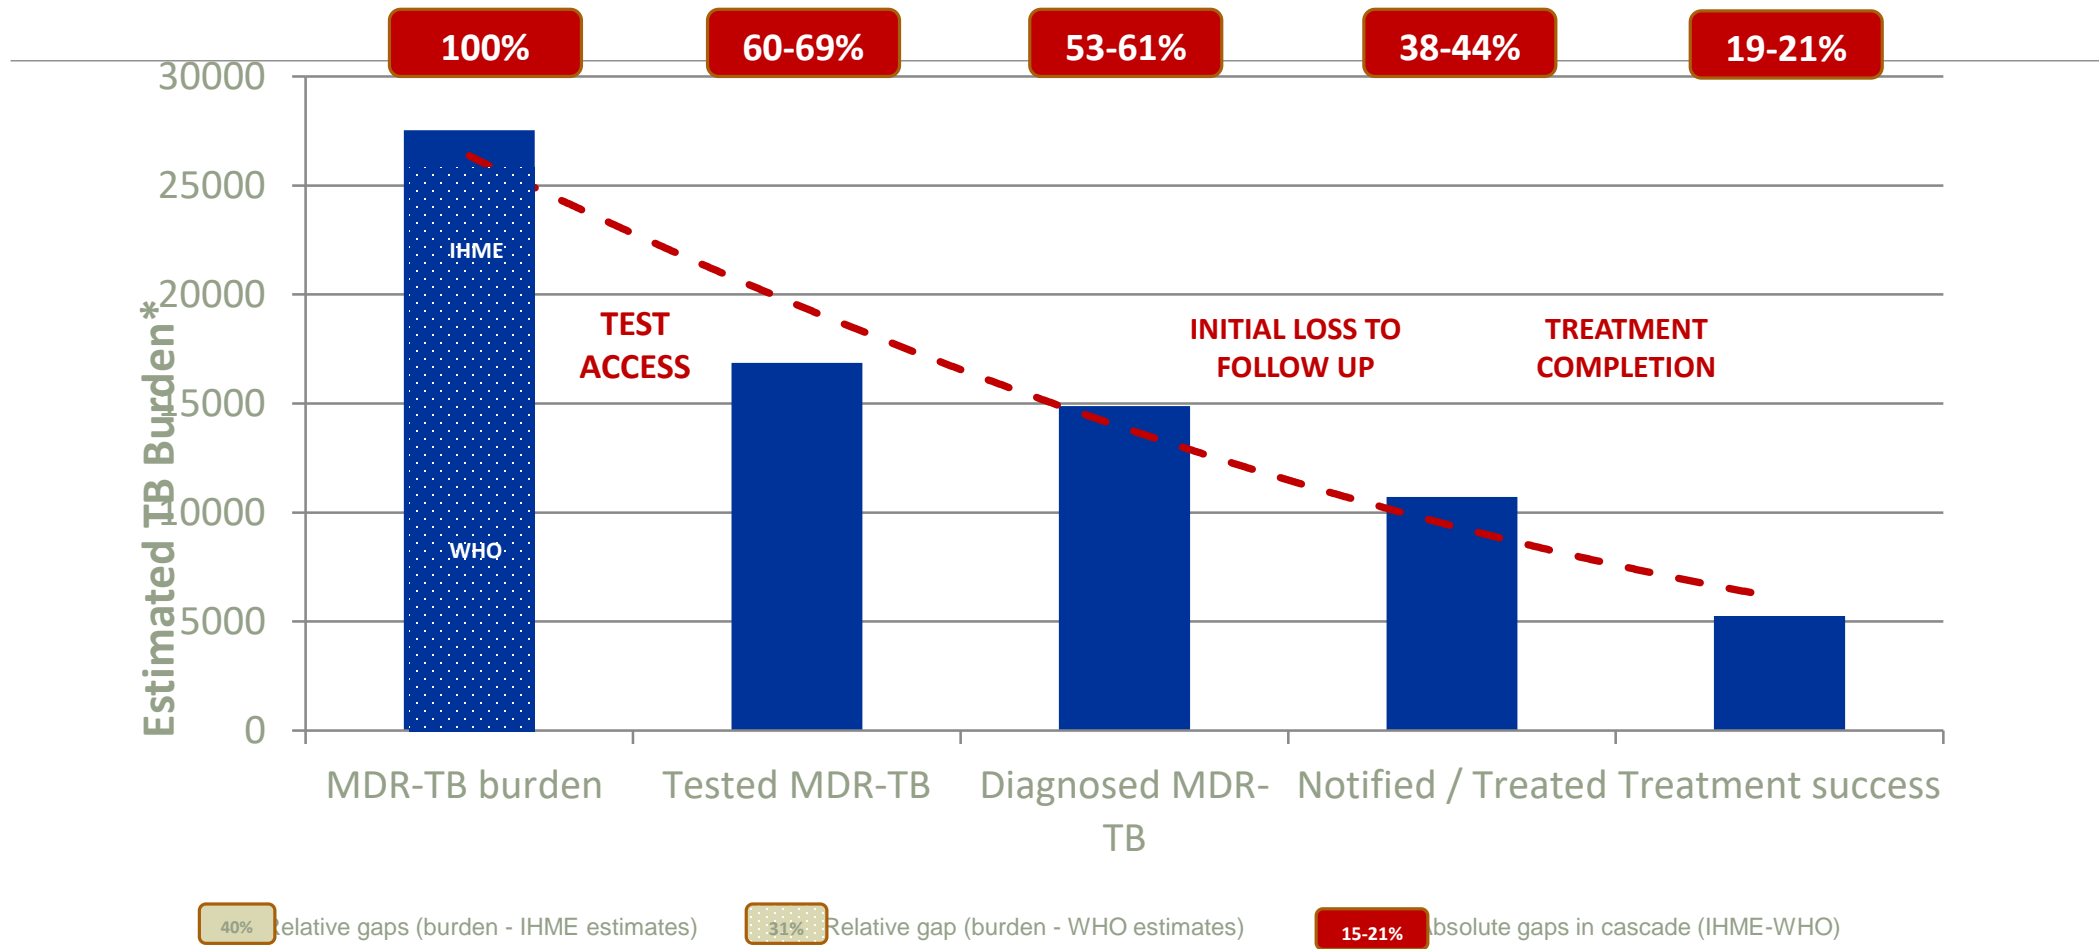

Cascade of care for all forms of TB in India's TB Control Program, 2013

Subbaraman R, Nathavitharana RR, Satyanarayana S, Pai M, Thomas BE, et al. (2016) The Tuberculosis Cascade of Care in India's Public Sector: A Systematic Review and Meta-analysis. *PLOS Medicine* 13(10): e1002149. doi:10.1371/journal.pmed.1002149

Access to new tools: new drugs

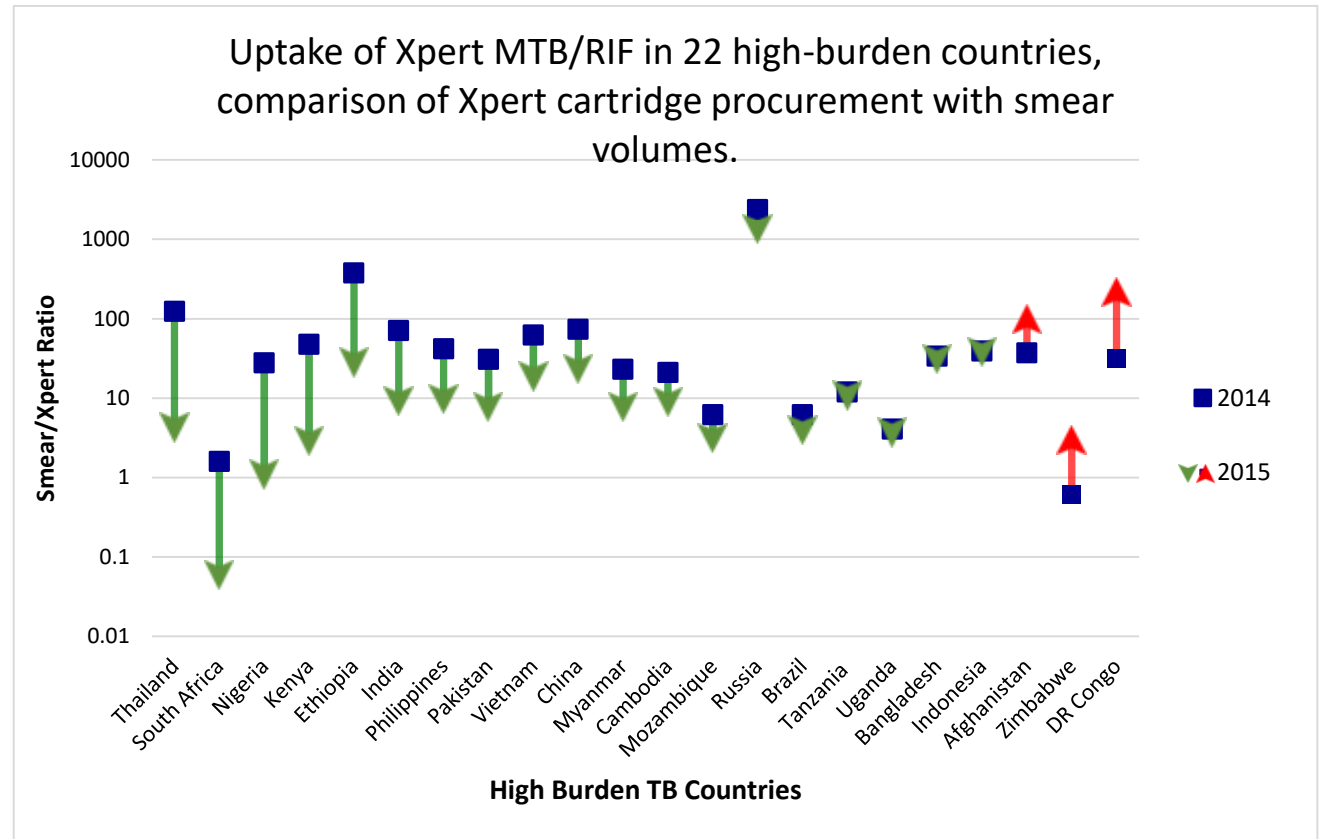

Progress in bedaquiline and delamanid global uptake by month compared with estimated need

Source: DR-TB STAT

Access to new tools: new diagnostics (GX)

As of 31 December 2016, a total of 6,659 GeneXpert instruments (comprising 29,865 modules) and 23,140,350 Xpert MTB/RIF cartridges had been procured in the public sector in 130 of the 145 countries eligible for concessional pricing.
Data: Cepheid

Low utilization of new tools

RESEARCH ARTICLE

Low implementation of Xpert MTB/RIF among HIV/TB co-infected adults in the International epidemiologic Databases to Evaluate AIDS (IeDEA) program

Kate Clouse^{1,2,3}, Meridith Blevins^{1,4}, Mary Lou Lindegren^{1,2}, Marcel Yotebieng⁵, Dung Thi Nguyen⁶, Alfred Omondi⁷, Denna Michael⁸, Djimon Marcel Zannou⁹, Gabriela Carriquiry¹⁰, April Pettit^{2,3*}, International Epidemiologic Databases to Evaluate AIDS (IeDEA) collaboration[†]

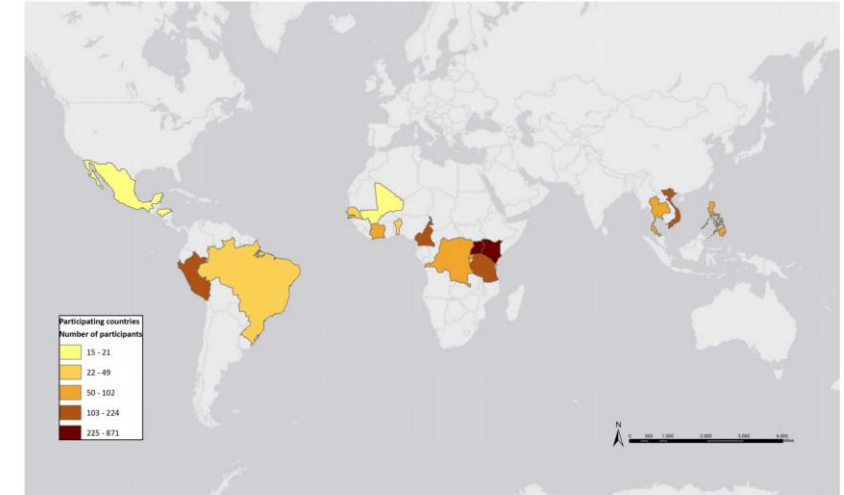

Fig 1. Participating countries (n = 18) and number of patients included by each. Map created in July 2016 by Kate Clouse using ArcMap GIS 10.3.1 (Esri, Redlands, CA).

Table 3. TB testing utilization and outcomes among 2722 adult patients.

	n (%)
TB test utilization (n = 2722)	
Received at least one TB test	2070 (76%)
Received no TB test	650 (24%)
Missing	2 (<1%)
Type of TB test performed (n = 2555)*	
AFB smear	2025 (79%)
Culture	333 (13%)
Xpert	118 (5%)
Other NAAT	79 (3%)

“Xpert utilization was low even though the majority of sites had access to the test”

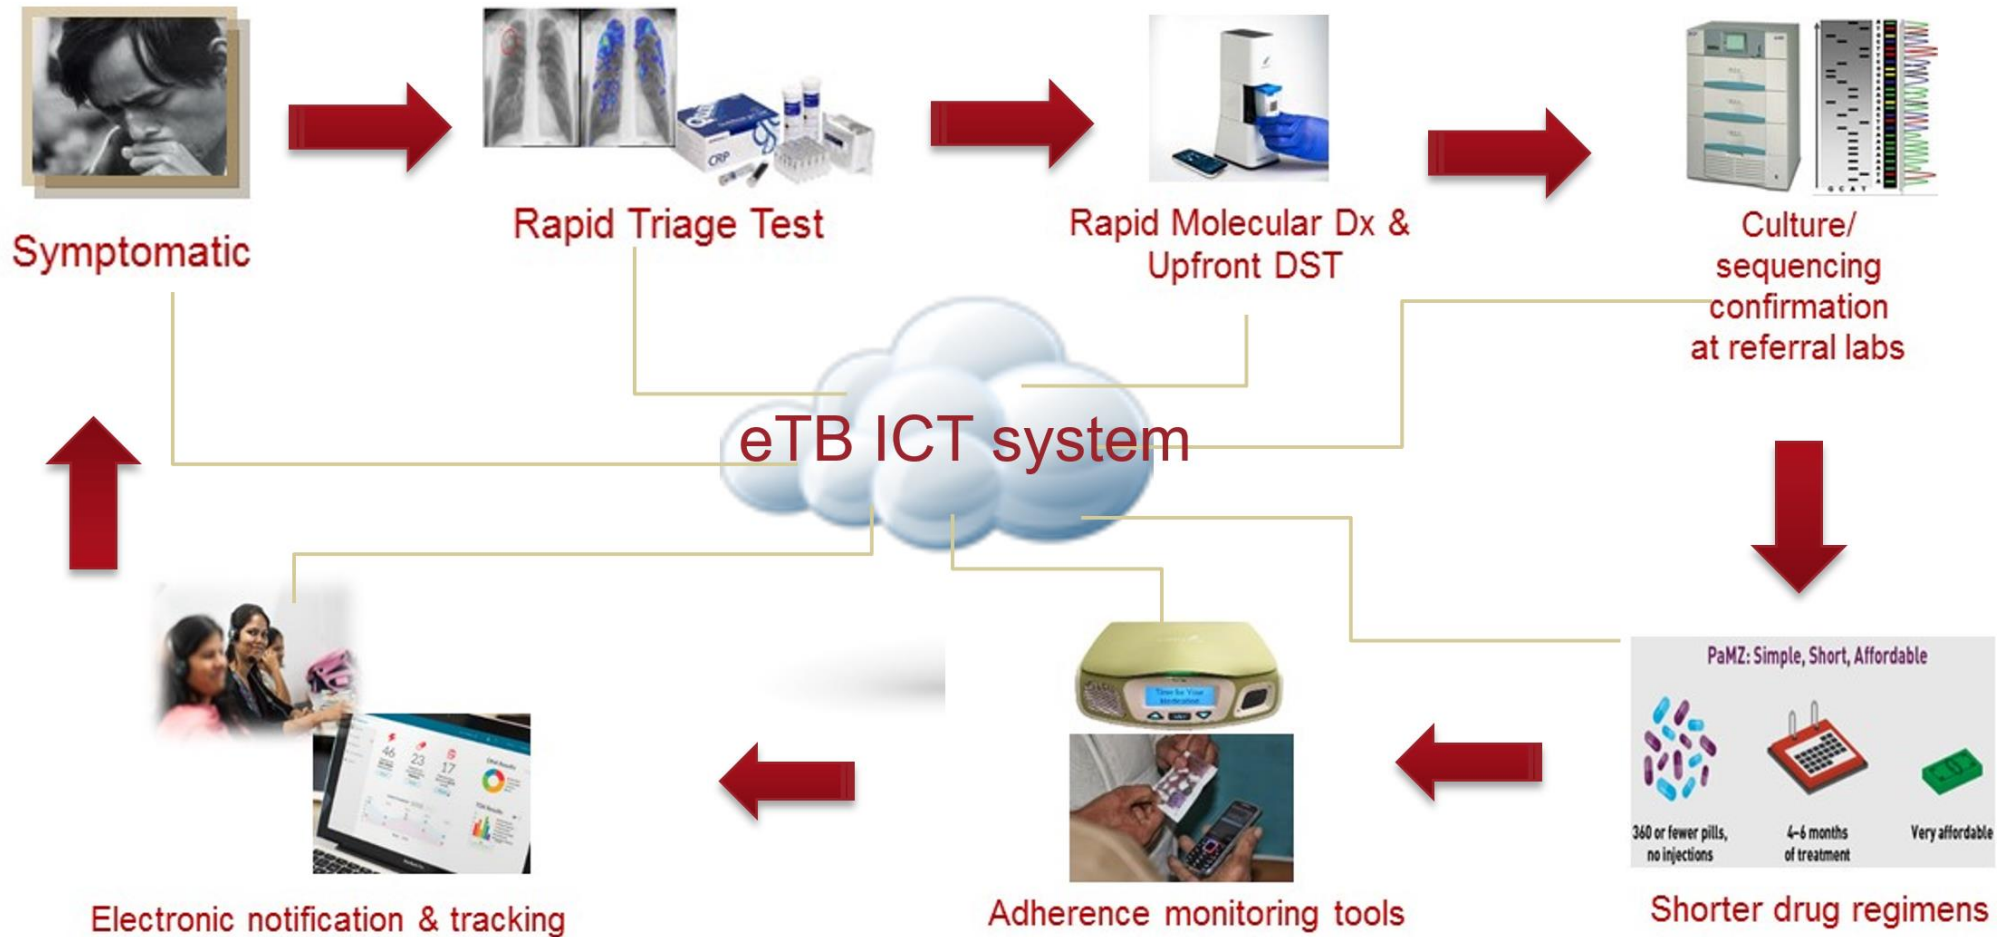

~~Problems~~

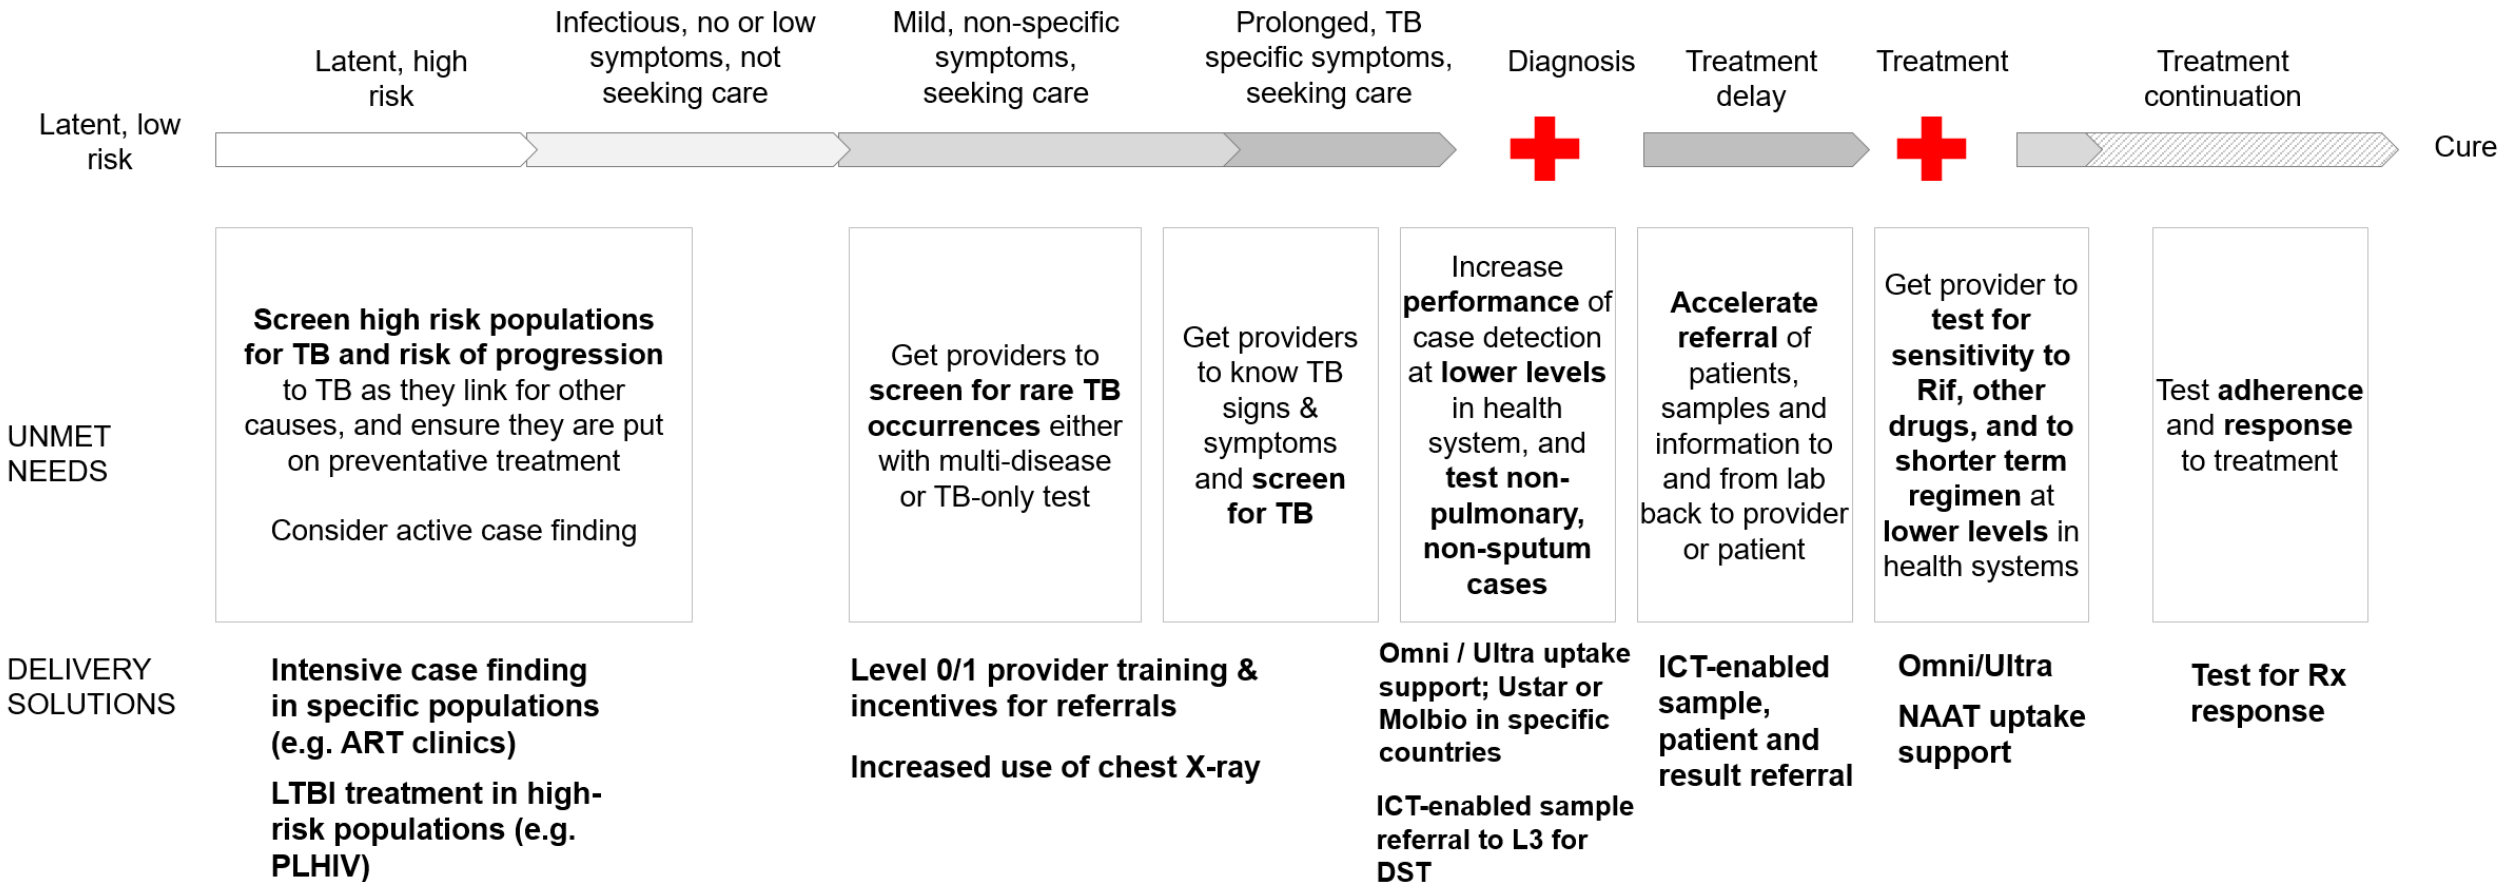

Solutions

TEST, TREAT AND TRACK: WE NEED COMPLETE SOLUTIONS

Solutions are required across the entire pathway

WE WILL NEED OPTIONS ACROSS THE VALUE CHAIN

Move the **test** lower, and move the **sample** higher

L1: Primary care

GeneXpert Omni system with Xpert MTB/RIF Ultra, TB LAMP, TrueNAT MTB, EasyNAT TB

L2: District level

Xpert MTB/RIF, and Xpert XDR for detecting resistance to quinolones and second-line injectable drugs

L3: Reference lab

First and second line LPAs
High throughput NAATs
Next-generation sequencing

Sample transportation system, supported by ICT

Centralized testing model for HIV and TB

ANALYSIS OF TURNAROUND TIME AND LOSS TO FOLLOW-UP IN LMICS

ANITA SURESH & MADHUKAR PAI

MCGILL TB CENTRE

Selected studies – HIV

Test	Country	Approach	Level of healthcare	Indicator		Citation
				Metric	Original (pre-intervention)	
EID	Multiple	EID national programmatic comparison	Central reference lab	TAT sample collection at site to lab, days	1.38 d in Namibia 5.25 d in Cambodia 12.6 d in Uganda	Chatterjee (2011)
				TAT result processing in lab, d	9 d in Namibia 18 d in Cambodia 23 d in Uganda	
				Loss to follow-up, % +ve infants not receiving txt	30% in Namibia 62% in Cambodia 63% in Uganda 78% in Senegal	
HIV CD4	Ethiopia	PPP Specimen Referral System utilizing postal workers	Reference lab	TAT from referral of specimens to a lab for CD4 monitoring to result receipt by referring facility, median, d (range)	7 d (2–14 d) in Addis Ababa 10 d (6–21 d) in Amhara Region	Kebede (2016)
				Time taken to transport specimen for monitoring after collection	4 h (2–6 h) in Addis Ababa >6 h (3–14 h) in other regions	
EID	Zambia		Central reference lab	TAT sample collected to result to caregiver, median (IQR; range) Central lab testing to return of result to clinic, median (IQR; range) Loss to follow-up, % +ve infants not receiving txt	92 d (84, 145; 28-487) 29 d (17, 36; 1-128) 33%	Sutcliff (2014)
HIV CD4	Multiple	POC vs. lab-based CD4 testing (Systematic Review)	Reference lab	TAT from HIV diagnosis to CD4 test, mean, d	10.5 d	Vojnov (2016)
				% patients who received CD4 test after HIV testing (95% CI)	70% (62-78%)	
				TAT HIV diagnosis to ART initiation, d	31.5 d	
				% patient retention CD4 testing to ART initiation (95% CI)	60% (47-74%)	
EID	Uganda	HUB model	Reference lab	TAT Sample collection-result delivery, d	49 d	Kiyaga (2013)

Selected studies – TB

Test	Country	Approach	Level of Healthcare	Indicator			Citation
				Metric	Original (pre-intervention)		
Culture	Uganda	PPP Specimen Referral System/postal workers	National TB Reference Lab	Specimen transport time, median, d (range)	12 d (1–240)		Joloba (2016)
				# sites referring specimens to NTRL (%)	50/900 (6%)		
Culture	Ethiopia	Time to first consultation, diagnosis and treatment	Multiple	TAT 1 st visit to provider until 1 st diagnosis, median, d (IQR)	27 d (8,60)		Yimer (2014)
				Delay based on where patients first seen, adj. odds ratio (95%CI)	Health centres: 5.1* (2.1, 12.5) Health posts: 109* (12, 958)
